Holding Headaches at Bay

Bodywork Eases Migraines and Tension Headaches

Cathy Ulrich

"Do you get headaches?" I asked Cindy. She had come to see me for massage to address her neck and shoulder pain but hadn't mentioned headaches.

"Well, yes," she said. "I've always had headaches and, now that you mention it, they seem to be worse when my neck hurts." Cindy went on to say she suffered from them as often as 2-3 times a week and typically treated them with ibuprofen.

Like many Americans, Cindy suffers from chronic, frequent headaches. Her neck pain finally prompted her to seek help, but she was so used to the headaches, she thought they were something she simply had to live with. MIGRAINES.

Migraine headaches occur when the blood vessels in the brain become dilated, usually due to a chemical reaction, such as food allergies or a stress response. They often start with visual disturbances and quickly develop into severe head pain accompanied by nausea, vomiting, dizziness, and sensitivity to light. They're usually felt on one side of the head, but can be on both sides. Migraines are often managed with medications and avoidance of foods known to trigger them, such as red wine, chocolate, aged cheese, and nuts. However, some bodywork techniques can also be effective in easing migraines or decreasing the frequency of these painful headaches.

Freedom from chronic headaches is an option many Americans don't even realize is possible.

What Cindy didn't understand was that frequent headaches are not normal and, with a little proactive planning, there is something that can be done to manage and even prevent them.

Types of Headaches

Headaches come in many varieties. Following is a short list of the most common types.

TENSION HEADACHES.

Exaggerated by stress, tension headaches are related to poor posture, jaw problems (such as temporomandibular joint disorder, or TMJ), and neck pain. Many people describe a headache that starts at the base of the skull and then moves in an arc over the ears and behind

the eyes. Tension headaches are most often caused or exacerbated by poor posture, work station positions, and body mechanics, creating undue stress on the upper neck muscles.

MIXED HEADACHES.

The term mixed headache is used to describe a tension headache that leads to a migraine. Typically, the tension headache starts first and the chemicals produced from the pain of it create conditions for a migraine to develop. In people with patterns of mixed headaches, the best way to avoid the onset of a migraine is to treat the tension headache.

Bodywork Options

A treatment regimen that includes bodywork, attention to body position, and stress management can help prevent or greatly reduce the frequency of headaches, in turn reducing your reliance on medication and the need to avoid food triggers. There are many different bodywork techniques, each with specific approaches for treating headaches. Following is a short list of techniques often effective in treating recurring headaches.

SWEDISH MASSAGE.

A tension headache, by its very name, implies the presence of stress and tension. Swedish massage, on the other hand, promotes relaxation and relieves muscle tension. When muscles become tight due to stress or poor posture, they eventually adapt a chronically shortened state. Swedish massage teaches the body how to let go of muscle tension and resets muscle tone.

Integrative Bodywork.

Rolfing, Hellerwork, Structural Integration, and CORE are examples of the types of bodywork designed to posture and structural improve alignment. A primary cause of chronic headaches is poor posture, which produces tension in the neck and shoulders because the weight of the head is not properly balanced on top of the spine. Integrative bodywork can produce lasting postural change for greater ease of movement. By selectively freeing the soft tissues, integrative bodywork literally can change postural alignment and remove the stresses and strains on the muscles that cause headaches.

DEEP TISSUE THERAPIES.

The integrative therapies mentioned above, as well as neuromuscular therapy and myofascial release, use similar techniques to free connective tissue. A chronically tensed muscle tends to maintain that tension, even after the stressful event has passed. Deep tissue techniques free the connective tissue glue, creating a new way for the muscle to function.

Reflexology.

Like acupuncture, reflexology works to move energy blockages in the body. By stimulating points on the feet that correspond to organs in the body, reflexologists can promote relaxation, reduce pain, and restore energy flow. Several scientific studies have shown that reflexology is a viable treatment for migraines, in some cases working as well as, or better than, medication—and without the side effects.

Craniosacral Therapy.

Craniosacral therapy addresses the inherent, gentle, rhythmic movement of the bones in the skull and their effect on the fluid that surrounds, bathes, and cushions the brain and spinal cord and runs throughout the body. Cranial bones move in miniscule amounts as a response to the production and absorption of cranial fluid. With head trauma, whiplash injury, or even severe stress, cranial bone movement can be compromised, resulting in headaches, dizziness, ringing in the ears, or vision disturbances. This therapy restores the normal movement of the cranial bones and fluid.

By addressing the root of the problem, regularly scheduled bodywork sessions can greatly reduce headaches as well as your need for medication. Remember, headaches are not normal, and you don't have to live with them.

Reflexology has proven as, or more, effective than medication--without the many side effects.

Elimination Effect

Clear Skin Depends on Internal Wellness

Shelley Burns, N.D.

Do you often wonder why a skin blemish has not resolved or why acne outbreaks continue in spite of countless therapies? If so, you may need to dig a bit deeper and look inside--inside your body, that is. Good digestive health and the health of your colon can mean healthy skin.

THE QUESTION IS, How?

Both the colon and skin are responsible for absorbing and releasing chemicals, water, and other metabolic products. The colon is the largest internal organ in the body. Its function is specifically to absorb food, nutrients, and water.

One function of skin is to help the body breathe. It inhales and exhales similar to how the lungs work. Inhalation and exhalation by the skin allows it to open pores and perspire. So, sweating is a good thing.

When the colon is unable to get rid of waste produced from food, the colon becomes constipated and toxic. The skin also becomes toxic in trying to perform

the elimination function, and often results in skin eruptions in the form of acne, eczema, and psoriasis.

Prevention

You can avoid some of this trouble with these tips:

- Consider removing certain foods from your diet--especially dairy. An allergy to milk and other dairy products can cause severe acne.
- Drink at least 64-80 ounces of water every day, as it lubricates the colon and helps with regularity.
- Refrain from dehydrating beverages like alcohol, coffee, and soda, as they can cause constipation.
- Strive for a daily bowel movement-try I-3 teaspoons of ground flax seeds added to your breakfast.

Beautiful skin starts from the inside out. Adopting these practices will not only improve colon and skin health, but will promote your overall health as well.

Water intake can clarify skin.

Exercise Myths

Fiction Vs. Fact

Although old fitness fictions like "no pain, no gain" are fading fast, plenty of misconceptions still exist. Following are some of the most common myths, counteracted by the latest research.

FICTION: You will burn more fat if you exercise longer at a lower intensity.

FACT: The most important focus in exercise and weight control is how many calories are burned during the activity. The faster you walk, step or run, the more calories you use per minute. However, high-intensity exercise may be more difficult to sustain.

FICTION: If you're not going to work out hard and often, exercise is a waste of time.

FACT: Any exercise is better than none. For example, regular walking or

gardening for as little as an hour a week has been shown to reduce the risk of heart disease.

FICTION: If you exercise long and hard enough, you will always get the results you want.

FACT: In reality, genetics plays an important role in how people respond to exercise. Your development of strength, speed, and endurance may be very different from that of other people you know.

FICTION: THE HEALTH AND FITNESS BENEFITS OF MIND-BODY EXERCISE LIKE T'AI CHI AND YOGA ARE QUESTIONABLE.

FACT: The benefits abound! T'ai Chi, for example, has been shown to help treat low-back pain and fibromyalgia. Improved flexibility, strength, and stress management are just some of the

benefits.

FICTION: Home workouts are fine, but going to a gym is the best way to get

FACT: Some people find it easier to stick to a home-based fitness program. In spite of all the hype on trendy exercise programs and facilities, the best program for you is the one you will participate in consistently.
